

# Cybersecurity Awareness Checklist

Use this checklist as a reference to strengthen daily practices, spark conversations, and evaluate where your organization may need additional support from trusted cybersecurity vendors.

01

Educate employees on phishing, social engineering, and safe digital habits.

02

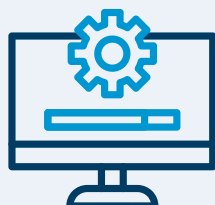

Require multi-factor authentication (MFA) for all critical systems.

03

Enforce strong, unique password policies and encourage the use of password managers.

04

Regularly update and patch systems, software, and applications.

05

Back up critical data and test recovery procedures frequently.

06

Create and test an incident response plan for cyber events.

07

Restrict access based on roles to minimize unnecessary exposure.

08

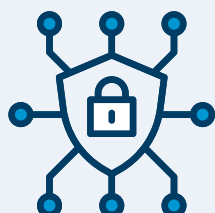

Review and manage vendor contracts to ensure security compliance.

09

Monitor network activity for suspicious behavior and anomalies.

10

Encourage a culture of cybersecurity awareness across the organization.
